**Grit**

This product is graded and washed in our washing plant. Its max size is from 7mm down. It is very suitable for large pipe bedding and is used extensively on the construction of motorways etc the most recent which we supplied to been the Kildare Bye Pass. It can also be used for bedding under cobble and paving slabs.

**Clause 505B**

This is a washed graded stone product produced in our washing plant which is predominantly round in shape. Its main uses are for percolation areas, drainage and soak holes. It is a very popular product on major road developments and motorways and which we have supplied extensively to the Kildare bye pass.

**Clause 804**

This product can be either produced from graded crushed rock or standard graded stone. The maximum size is 75mm mixed with smaller sizes right down to dust. Clause 804 is used as a blinding or finished surface on top of a base material (e.g. Clause 616).

**Clause 616**

This is a gravel type material which is extracted directly off the face/top of the gravel pit. Clause 616 consists of big stones down to a fine gravel. Its primary use is as a base material for roads, yards, slabs etc.

**Dust**

This is a fine crushed stone not powder like but small and fine. Dust can be used on top of Clause 804 as a final finish or just to seal off before applying the final surface (e.g. pebble). It can also be used for bedding under cobble and paving slabs.
